General Mixing Guide

Ensuring uniform color: Check that product batch numbers are the same. Different batch numbers can produce slight variance in color. If different batch numbers, box product together and blend thoroughly before mixing product with other components. Always test application on site.

Broadcasting: To keep chips from disappearing into coating, allow coating to cure for 10–15 minutes. Then broadcast chips according to desired look. Coverage rates vary depending on customer preferences and application techniques.

Colors are shown as examples only. KRETUS® does not manufacture or distribute color quartz and color chip. Color and availability depend on the customer's chosen manufacturer and distributor.
